

## Sunflex Exterior Aluminium Venetians

### SPECIFICATIONS

- Profiles, side channels and pelmets are manufactured using non-corrosive aluminium alloys.
- All components are either corrosion resistant or made from synthetic materials.
- 80mm slats are reinforced with copper free aluminium alloy and come with a rolling edge to provide added strength and flexibility. All are pre-treated and stove enamelled.

### STANDARD FORMAT

- Sunflex is tiltable and retractable.
- Tilt range set for 90 degrees closed as standard, optional through to 180 degrees
- Blinds lowered in the closed position and opened when retracting
- The slats are guided by extruded aluminium side channels.
- Rubber inserts for noise dampening included.
- Stainless steel wire guides optional.
- All blind components are aluminium, stainless steel or UV stabilised nylon.

The Sunflex external venetian provides an attractive and versatile shading solution that looks fantastic on any bach, home or commercial building.

These external blinds not only act to reduce solar glare and transmission, they also contribute markedly to the reduction of heat gain through windows.

The Sunflex operates in such a way that it provides shading and cooling, therefore acting to reduce household energy costs and expenditures.

As a new era of environmental awareness dawns, we are finding people are becoming more concerned with the impact they are having on their surroundings, especially when it comes to matters relating to carbon and greenhouse gas emissions. This is being reflected in recent architectural, building and interior design trends.

Both streamlined and functional, Sunflex Exterior Venetians efficiently shade large expanses of glass, while at the same time creating a striking facade.

Shutters Blinds Screens Fences

## CONTROL OPTIONS

- Motorised with remote control.
- System features include handset with scroll function for incremental blade adjustment and preprogrammed intermediate blade setting.
- Sunflex Blinds will be installed with wind sensors to ensure they retract in high winds.
- Sun Sensors can also be fitted so that the slats automatically tilt as the sun hits them.

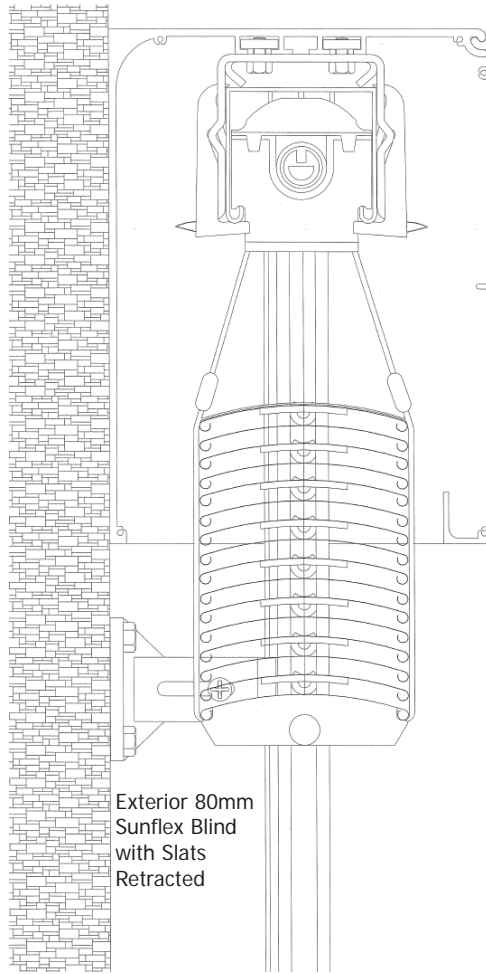

## SLATS COLOURS STANDARD

- Silver
- Bronze
- White
- Black

## PELMETS

- Extruded aluminium.
- Back wall height 200mm/  
Width projection 150mm/  
Front face panel height 200mm
- Available in either silver anodised or custom powder coated.

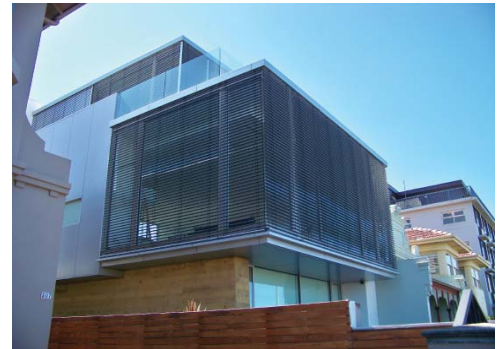

The Sunflex Blind is attached to the exterior of the building but is controlled with a remote from inside. Unlike traditional aluminium louvres that are over a window all the time these blinds offer you the flexibility to lift, lower or tilt them at the touch of a button. This means that you have full control of your privacy and view but can reflect heat and UV as required.

Exterior 80mm Sunflex Blind with Slats Retracted

The Sunflex Venetians are a fantastic option for commercial buildings. By tilting the slats you will deflect the glare of direct sunlight from computer screens. The filtered light they allow through means less artificial lighting and the heat deflection means airconditioners are used less, all of which lowers power bills.

In the photo above the slats are open but tilted at an angle to allow a view out and then in the photo below the blinds are closed to reflect UV, which protects your furnishings, and heat, to keep your home cooler.

Sunflex Blinds are the most flexible, stylish and functional sun protection you can install.
