

THERMACELL BLINDS

Insulating Cellular Blinds

WARM UP YOUR HOME

Let quality cellular shades illuminate your home.

This attractive, flexible, innovative blind is a top seller in stylish homes around the world. Its popularity throughout Europe, America, and New Zealand is based not only on its exceptional looks but the insulating properties it offers you.

Thermacell Blinds are designed to fit tightly into your window jamb. This enhances both the insulating and room darkening properties of the blind.

Insulation is achieved by trapping a still layer of air in the honeycombe construction of the fabric, creating an effective barrier between the exterior and interior of your home. This still air layer reduces heat transfer and saves you money on your power bill both in summer and winter.

During the winter, the blind helps retain heat in your home creating a warmer, drier, healthier environment for you and your family. Your heater will run at lower temperatures for less time and your power bills will drop.

If you leave the blinds down in summer, they reduce the amount of heat entering your home and decreasing the time your air-conditioner needs to run.

The design of the slim colour co-ordinated aluminium headrail combined with the crisp pleated fabric means that this blind will have minimal visual impact in your window or door when it is lifted.

MORE CHOICES, MORE COMFORT, MORE ENERGY EFFICIENCY

With the large range of Sheer, Lightfilter and Room Darkening fabrics combined with the innovative options for operation, these blinds really do give you More Choices, More Comfort and More Energy Efficiency than any other blind you have ever tried.
